SIT Nagpur

Dr. Bhupesh Kumar Dewangan

Associate Professor,

IPR Co-ordinator

DECLARATION

I hereby declare that the project titled “**Travel Blog Website – Puniki Vlogs**” submitted to Symbiosis Institute of Technology, Constituent of Symbiosis International (Deemed University) Pune for the award of the degree of Bachelor of Technology in Computer Science and Engineering is a result of original research carried out by me. I understand that my report may be made electronically available to the public. It is further declared that the project report or any part thereof has not been previously submitted to any University or Institute for the award of any degree or diploma.

Name(s) of All Student(s) : **Purva Ghordadekar , Nidhhi Khobragade Kiran Satpute**

PRN: 25070521292, 25070521293, 25070521294

Degree: Bachelor of Technology in CSE

Department: Computer Science and Engineering

Title of the project : **Travel Blog Website – Puniki Vlogs**

(Signatures of the All Students)

Date:

ABSTRACT

The “Puniki Vlogs” project is a responsive travel blog website designed to showcase travel destinations, experiences, and stories in an engaging and visually appealing manner. The platform allows users to explore different locations such as Phuket, New York City, and Paris through images and content.

The website focuses on UI/UX design, responsiveness, and smooth navigation to enhance user experience. It is developed using modern web technologies like HTML, CSS, and JavaScript.

Keywords: Travel Blog, Web Development, UI/UX, Responsive Design, Frontend

Chapter 1

Background and Technical Overview

This project is a travel blog website designed to showcase destinations and travel experiences with a modern UI. It focuses on responsiveness, user experience, and visual storytelling.

1.1 Background

Travel Blog Website – Puniki Vlogs is a front-end web project developed as part of the Hack-O-Week initiative at Symbiosis Institute of Technology, Nagpur. The project focuses on creating a visually appealing and user-friendly platform to showcase travel destinations, experiences, and blogs.

In today's digital era, travel websites have evolved from simple static pages to interactive and visually rich platforms. Users expect smooth navigation, attractive UI, and engaging content. This project fulfills those expectations by providing a modern travel blogging interface using lightweight frontend technologies.

The website does not rely on backend infrastructure, making it fast, efficient, and easy to deploy.

1.2 Technical Stack

1. **HTML5** - Provides the basic structure of the website
2. **CSS3** - Used for styling and layout
3. **JavaScript (Vanilla JS)** - Adds interactivity to the website
4. **Image Sources** - High-quality images from platforms like Unsplash and other public sources

1.3 Key Features

1. The website includes the following important features:
2. Interactive and visually appealing homepage
3. Destination sections showcasing different places (e.g., Phuket, New York, Paris)
4. Image-based layout for better user engagement
5. Smooth scrolling navigation using anchor links

Chapter 2

Problem Statement and Motivation

Existing travel blogs often suffer from cluttered layouts and poor navigation. This project aims to provide a clean, fast, and engaging interface.

2.1 Problem Statement

Most existing travel blog websites are either too simple (static with no interaction) or too complex (requiring login systems, APIs, and backend servers). This creates a gap for a lightweight, user-friendly travel platform that can still provide a rich visual experience..

2.2 Motivation

1. Visually showcases popular travel destinations
2. Provides smooth and engaging user interaction
3. Works without backend or server-side technologies
4. Is fully responsive across all devices

Chapter 3

Novelty and Innovative Contributions

Various travel platforms and blog designs were studied to understand UI/UX patterns and improve performance and usability.

3.1 Innovations

1. **Interactive UI Design** - The website features a clean and visually engaging interface with a structured layout that enhances user experience. The use of images, sections, and smooth navigation makes it intuitive for users.
2. **Dynamic Country Filtering** — Instead of text-heavy content, the website uses image cards to represent travel destinations such as Phuket, New York, and Paris, improving visual storytelling.
3. **Gallery with Smooth Hover Animations** — CSS-based hover effects and transitions are used to enhance interactivity and provide a premium feel to the website without heavy frameworks.
4. **Minimal Footprint** — The entire project is built using simple technologies (HTML, CSS, JavaScript) without any external frameworks or backend integration

Chapter 4

Technical Advantages and Practical Usefulness

4.1 Technical Advantages

1. No server, no database, no API keys required — zero cost to host
2. Loads in under one second due to minimal resource footprint
3. Cross-browser compatible — tested on Chrome, Firefox, and Edge
4. Fully responsive — adapts from 320px mobile to 4K desktop

4.2 Practical Usefulness

1. Travel agencies can adopt the template for promotional microsites
2. Students can extend the project to add backend booking features
3. Can be used in educational settings to teach CSS Grid and event handling
4. Demonstrates AI chatbot UX patterns for future full-stack integratio

Chapter 5

Detailed Methodology / System Architecture

5.1 System Architecture

The **Travel Blog Website – Puniki Vlogs** follows a structured development approach and a simple yet efficient system architecture. The project is designed as a frontend-based application where all components interact through JavaScript and DOM manipulation.

Figure 1: Homepage of Puniki Vlogs

5.2 Module Breakdown

1. Header Module — Gradient banner with site name and tagline
2. Navigation Module — Helps users navigate between sections easily
3. Destination Filter Module — Enhances user engagement through visuals
4. Gallery Module — Provides a visual browsing experience

Figure 2: Destinations Section

5.3 Data Flow

The **Puniki Vlogs** website follows a simple and efficient client-side data flow mechanism. Since the project is built without a backend, all processing happens within the browser using JavaScript and DOM manipulation.

Figure 3: Additional UI Section

5.4 Responsive Strategy

The Puniki Vlogs website is designed to be fully responsive, ensuring a seamless user experience across different devices such as mobile phones, tablets, and desktop systems.

The responsiveness is achieved using modern CSS techniques like media queries, flexible layouts, and adaptive design principles.

Chapter 6

Prior Art and Related Work (Literature Survey)

1. Lonely Planet (lonelyplanet.com) — Lonely Planet is one of the most popular travel content platforms and serves as an industry benchmark for travel blogging websites. It provides detailed travel guides, recommendations, and multimedia content.
2. TripAdvisor — TripAdvisor is a well-known travel platform that provides user reviews, ratings, and AI-driven recommendations.
3. W3Schools Travel Template — W3Schools provides basic HTML travel website templates used for learning purposes.
4. MDN Web Docs CSS Grid Guide — The grid system used in *Puniki Vlogs* is inspired by MDN guidelines to ensure a responsive and flexible layout.
5. Chatbot UI Patterns (Nielsen Norman Group, 2022) — Guidelines followed for the chatbot widget placement and interaction model.

Chapter 7

Applications and Deployment Areas

1. Static hosting platforms: GitHub Pages, Netlify, Vercel — deploy in under 2 minutes with no configuration
2. Tourism and hospitality microsites for local businesses
3. Educational demonstrations for web development courses
4. Portfolio projects showcasing HTML/CSS/JS proficiency
5. Foundation for a full-stack travel booking system (Phase 2)

Chapter 8

Conclusion and Future Scope

8.1 Conclusion

The **Travel Blog Website – Puniki Vlogs** project successfully demonstrates the development of a modern, responsive, and user-friendly travel blog using frontend technologies. The project highlights how an attractive and functional website can be built using only HTML, CSS, and JavaScript without relying on backend infrastructure.

8.2 Future Scope

1. Although the project is fully functional, it can be further enhanced with advanced features to make it more powerful and scalable:
2. Add a backend with Node.js/Express for user-submitted travel reviews and ratings
3. Add server-side functionality
4. Add multi-language support for international travellers
5. Introduce a bookmark/wishlist feature using local Storage for saving favourite destinations
